Note: Sensor limits are displayed based on selected range.

PRESSURE SCALE – The pressure scale is indicated by the units displayed under the

reading. The scale can be changed by using  to highlight the unit line and

  to toggle between available pressure units as listed below.

Pressure Units	
PSI	mmHg @ 0 °C
inH ₂ O @ 4 °C	mmHg @ 20 °C
inH ₂ O @ 20 °C	kg/cm ²
inH ₂ O @ 60 °F	kPa
cmH ₂ O @ 20 °C	mBar
inHg @ 0 °C	Bar
inHg @ 20 °C	

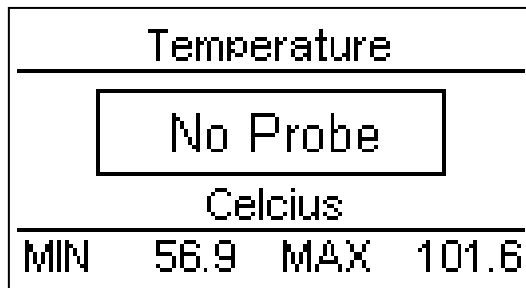

NOTE: If the measured pressure is outside of the range of the instrument, an OVER RANGE or UNDER RANGE message box will be displayed.

Typical display with "Over Range" message box.

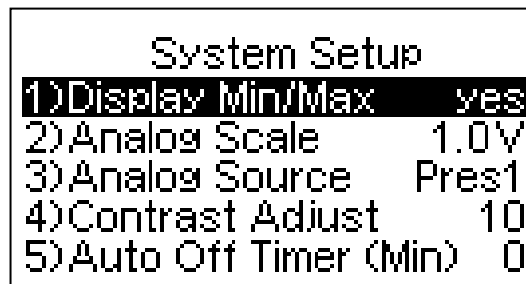

TEMPERATURE SCALE – The temperature scale is indicated by the units displayed under the reading. The scale can be changed by using  to highlight the unit line and  to toggle the temperature units between Degrees Celsius (°C) and Fahrenheit (°F).

NOTE: If the measured temperature is outside of the range of the instrument, an OVER RANGE or UNDER RANGE message box will be displayed. For models with the YSI option, the NO PROBE message box will be displayed when the unit detects an open connection. For models with the RTD option, the OVER RANGE message box will also be displayed with an open connection.

Typical display with “No Probe” message box.
NOTE: YSI option only

SYSTEM SETUP – The Setup Mode allows the user to adjust the configuration of the meter. The Setup screen can be entered using the  key. The parameters can be changed by using  to highlight the line and  to toggle the available options. The Setup screen can be exited using the  key.

The following is a breakdown of the parameters available in the configuration of the unit and their available options:

System Setup Configuration		
Parameter	Description	Range
Display Min/Max	Selects whether the Min and Max values will be displayed on the main screens (except COMBINED).	yes/no
Analog Scale	Analog Output Scaling voltage. This is the maximum analog output voltage. The output is scaled to this voltage over the positive range of the selected analog source.	1.0 to 4.0 Volts
Analog Source	Selects the source reading for the analog output	Pres1, Pres2, or Temp
Contrast Adjust	Sets the contrast of the display screen.	0 to 20
Auto Off Timer	Determines the period of inactivity before the meter is turned OFF. A timer is started when the meter is turned ON and is reset each time a key is pressed. When the timer reaches the value set in this parameter, the power is automatically turned OFF. (NOTE: Setting this parameter to 0 disables the Auto Off timer. When running from line power, the meter does not automatically shut off.)	0 to 30 Minutes
Battery Life	Displays current life of the battery. At 10%, a warning screen will appear.	0 to 100% (Read Only)
Beep Length	Sets audible beep duration.	0 to 15
Filter – Pres 1	Determines the number of samples that are averaged in the digital filter. The software has a Digital Filter that averages the readings to produce a stable display. (NOTE: Increasing this setting will cause a more stable display. However, it will also cause a slower response to small changes. The best setting is the smallest number that provides a stable display.)	0 to 10 Seconds
Filter – Pres 2		
Filter – Temp		
RTD Type (OPTION R1)	Sets the Temperature Coefficient (alpha) to match that of the RTD probe.	0.00385/°C or 0.00392/°C
Software	Displays current software program.	(Read Only)

ZEROING PRESSURE SCALES – When there is no pressure applied to either port, the display should read “0.” It may be necessary to zero the pressure scales to remove any errors due to ambient conditions. This is done by pressing the  key until the zeroing instructions are displayed, then pressing  simultaneously to begin the process. The “ZEROING...” message will flash while the scale is being zeroed.

When the zeroing instructions are displayed again, the process is complete.

NOTE: Each sensor needs to be zeroed separately.

LOW BATTERY – When the battery life reaches 10 percent, the LOW BATTERY message box will be displayed.

NOTE: A battery eliminator receptacle is provided so that the unit can be powered by the optional 9 VDC Battery Eliminator, enabling continuous operation.

NOTE: The unit is shipped with a Red Battery Lock-Out plug installed into the line power receptacle as shown below. Its purpose is to prevent the unit from accidentally being turned on during handling and transport, subsequently depleting the battery. This plug must be removed before any use!

KEYS

Six tactile-touch keys are provided for system operation:

– This key turns the unit off and on. The unit will return to the main screen that was active when it was turned off.

– In the DISPLAY MODE, these keys toggle the display through the available main screens.

In the SELECT MODE, if a parameter has been highlighted, these keys will scroll through the available settings.

– On any screen, there are a number of parameters that may be selected and changed. This key sequences the cursor (Highlight) through those parameters.

– This key is used to Hold (freeze) and Reset (unfreeze) any of the input displays. Depressing this key will hold the currently displayed Pressure or Temperature reading until reset. Each input can be held independently.

When active, the word “HOLD” is in the display. Depressing this key on a screen that is held will reset that input and remove the word “HOLD” from the display.

NOTE: In the composite screen, the hold feature requires that the specific input be

selected using  before  is used.

– This key toggles the unit into and out of the Setup Mode. Depressing this key will enter the Setup screen where the configuration can be viewed and adjusted. Depressing the key again will exit the Setup Mode and return to the previously viewed main screen. This will also save any changes to the internal EEPROM memory so they will be retained even with the power turned off or battery removed.

OPTIONS

ANALOG OUTPUT – The unit may be ordered with a DC Analog Output Option. This option provides a filtered analog output that is representative of the displayed pressure or temperature, and is provided via a BNC connector on the top of the unit. The source parameter for the analog output is selectable in the Setup Menu between Pressure (Pres) or Temperature (Temp). The output is scaled to match the 0 to FS range of the selected source parameter over a variable internally generated reference voltage. This reference voltage is selectable from 1.0 to 4.0 VDC in 0.1 V increments through the Setup Menu. Filtering is dependent on the Digital Filter Setting (See System Setup section for more information).

TEMPERATURE – The unit may be ordered with the Temperature Option. This option allows the unit to read an external temperature sensor/transducer and display temperatures between -20 to 100 °C (-4.0 to 212.0 °F). The temperature probe interface is a standard ¼" Phone Jack.

- **YSI 700 Temperature Input (Y7)** – This option allows the unit to display temperature measured by a YSI 700 series standard temperature probe.
- **RTD Temperature Input (R1)** – This option allows the unit to display temperature measured by a standard 100 Ω RTD. This option supports selectable temperature coefficients (alpha) to match that of the sensor or probe:
 - 0.00385 Ω/Ω/°C (most common)
 - 0.00392 Ω/Ω/°C

COMMUNICATIONS

Since the meter does not handle a great deal of data, the RS-232 communications link has been optimized to allow the user, through very simple instructions, to control and request data from the meter. Refer to Specifications section for RS-232 Settings (Baud, etc).

Data transmitted/received is in standard ASCII format, and all numerical values are in BCD format. All commands sent to the unit should be terminated with a “Carriage Return” character (<CR> or in hexadecimal, 0x0D). All commands and responses are echoed by the unit for confirmation of communication, and are terminated with “Carriage Return” and “Line Feed” characters (<CR><LF> or in hexadecimal, 0x0D0A). If an invalid command is received, the unit will respond with the characters “??”.

The following section describes the protocol used by the meter in detail:

<p>Q - <u>QUICKSEND</u></p>	<p>QUICKSEND is a feature that allows the user to receive an automatic update of all of the meter data without any further user interaction. When the QUICKSEND command is received, the feature is turned ON and the meter will automatically send all of the device data every half second. The Quicksend feature is toggled ON and OFF with the QUICKSEND command. See the table below for details on the data structure.</p> <p><u>Usage:</u></p> <p style="text-align: center;">Q(CR)</p> <p>Where: Q – QUICKSEND command CR - Carriage Return</p>

X - <u>CANCEL</u>	<p>The CANCEL command is simply a way to re-establish proper control, should a communications error occur or an incorrect command be transmitted. For the most part, an incorrect command will simply be ignored and the meter will return to listening for future commands. However, a prior command may be cancelled midstream by transmitting the CANCEL command anytime.</p> <p><u>Usage:</u></p> <p style="text-align: center;">X</p> <p>This command does not require a carriage return, nor will it acknowledge with a carriage return. However, it will echo an 'X' character to indicate that the CANCEL command has been received.</p> <p>NOTE: The VERSION or CANCEL commands may also be utilized as an acknowledgement of the meter being on line.</p>
